

## **Asthma**

### **Testimonial # 74:**

September 19, 2002

Dear Scott, As you know, I have been **using Immunocal for about six months**. What you didn't know, until now, is that I was sending some of it to my brother in Barbados. His **eleven-year-old daughter has asthma** and, although she has been to three different doctors, she was getting very little relief. About two months ago, I received a call from my brother who informed me that **after ten days of using the Immunocal**, his daughter's symptoms had **virtually disappeared**. He was surprised and delighted, to say the least. But here is the **REALLY amazing part**: Just to convince himself that it was the Immunocal that had made his daughter better, he stopped giving it to her. And after a week all of her symptoms returned – the coughing, the wheezing, and the shortness of breath. He then put her back on the **Immunocal**, and within three days she was back to her healthy self, once again. Now he buys the Immunocal locally, in Barbados, and he is convinced that if he continues to give it to her she may be cured in about a year's time. I don't know about anyone else but I'm sold on this product. I think it is truly amazing.

**Sincerely, Jason**
