

Bee Stings

Skin Cream testimonial #: 110

Hi Jim, A few things.

First my neighbor, who is in the media business, was **stung by a bee** the other day and came over to see if I had any baking soda. I had her try the Skin Perfecting Cream and she was blown away, the **pain gone instantly**. She is so impressed that we are going to meet with her to try and figure out ways to promote the Cream and the Immunocal. Then I was stung twice in 2 days and I have ended up in the emergency room 3 times with stings, put the cream on and bingo, no pain and no emergency room. I honestly feel that because I take Immunocal daily and also the other anti-oxidants that my immune system is in such good shape that it has successfully fought off the effects of the stings. The cream absolutely stopped the stinging immediately!

Tom Pratt for a friend

Psoriasis testimonial #: 111

Roland is a 44 year-old energetic and sociable business entrepreneur who suffered from **psoriasis** for ten years. Itchy, scaly eruptions often covered his entire body, and aggressive scratching led to bleeding and scabbing. His dermatologist tried many different treatments including strong topical corticosteroids and methotrexate tablets, which he had to discontinue due to side-effects. Ultraviolet light therapy was suggested, but having the financial means, Roland preferred frequent trips to Mexico and the Caribbean to sitting in artificial light. Having done significant homework on his condition, he concluded that the psoriasis was caused by an immune dysfunction. He started taking 40 grams/day of Immunocal to raise his glutathione levels. Within two weeks he was free of bleeding and scabs and described his scaling as 75% improved.
