Infected Tooth Testimonial # 127

"Over the last 3 years my teeth having been going on me. Rather than having them pulled, I have been having root canals done on them. I had stopped taking the Immunocal because I had run out of it around Christmas, and even then I was rarely taking it myself (but getting everyone else to use it). There wouldn't be another shipment until my shuttle kicked on February 10. Then a day before I got the box (February 9th) I had to go to the dentist. A new tooth was bothering me. **The dentist told me that I would have to get another root canal** which I was going to do, but then I told him not to begin because I was going to try Immunocal. Anyway, I started taking it faithfully everyday and **the infection went away!** I was back to him the other day and he said usually the infection would have reoccurred by now, and he said the longer I go without infection, hence no root canals, the more it would seem that it was the Immunocal that did the trick.... Anyway, so far my teeth feel great. Perhaps, the Immunocal stopped the infection and allowed the nerve to be revitalized although my impression of a nerve is that like the brain, once it starts to go, there is no reversal."

Tom Garvey Charlottetown PE, Canada

Infected Ear & Nose Testimonial # 128

Dave Herman (LaVonne's son) shared:

I've had difficulty hearing things most of my life, and after several ear infections, it culminated in a very nasty procedure that involved removing my right ear from my head (I swear I am not making this up!), and rebuilding all the bones of the inner ear with salvaged cartilage. It did help, but it still left me with below normal hearing performance in that ear. It has been this way since High School, and I've grown accustomed to it. The other day, while I was sitting in my office, reading the patent information on Immunocal (Ok, Ok, I was actually reading Popular Science!) I heard something really, I could hear my watch ticking. Now, I understand this means very little to you, but I've never been able to do this. Never in my entire life had I been able to hear the ticking of my watch while it was in my lap. Furthermore, I was able to hear the ticking of my watch when I held it up to my right ear. This was and remains amazing to me. My amateur conclusion: I think I've been victim of a prolonged inner ear/nasal infection, because I've never really been able to consistently breath via my nose, I'm in a constant state of nasal congestion. Now this hasn't yet changed too much, I mean, I feel a general improvement, but I think this is only the beginning. Because of this, I'm now taking be-tween 2 and 3 packets of Immunocal a day. Yeah, I guess it could become expensive, but I don't plan on money being much of an issue in a few months from now anyway! Now of course I've felt all the other benefits of the Immunocal, I feel better, I don't get sick, and I have a great deal of energy. I also noticed my skin became much more clear and soft. Even here in the South, my skin would get dry and flaky in the low humidity of the winter, but not this year, I have smooth skin, just like I was slathering body lotion every day. I think the real proof is going to come as Spring gets ready to unload it's usual assault of pollen on my immune system. Not many people know this, but an allergic reaction to pollen and other non-threatening things like that are all signs of a compromised immune system. I've read that Immunocal can have a positive effect on allergies, and I'm going to be the guinea pig! So far, so good... I was starting to have itchy eyes the other day, I took a packet of Immunocal, and I swear I am not making this up, my eyes stopped itching in about three minutes, for the rest of the day! I'll keep y'all informed! **David Herman Atlanta GA.**

Ed: note: David started taking Immunocal only 5 months ago at one packet a day. Just recently he upped the packets and of course takes the Co- Factor multiple/vitamin/mineral supplement with it
