

Lyme Disease

Testimonial # 133

About 11 years ago, I noticed that I had this very strange 'rash' on my leg. It looked like some bug had drawn a bulls-eye on my leg and took aim! At the time, I had no knowledge whatsoever of Lyme Disease and I just assumed it was some sort of weird spider bite. I showed it to a few friends and then forgot about it. I did feel a bit 'off' for a few days after that, like I had a touch of the flu, but I had no idea that the two of these things could be related to each other. For a few years, life went on as normal. Then health issues started to crop up -unexplained low-level fevers, swollen glands, joint pains (which increased in intensity over the next several years), eye problems, gradually increasing weakness in my legs, numbness and tingling sensations in my right arm and leg, neurological problems (brain fog) and a chronic fatigue that left me feeling totally drained from morning to night. Tests for arthritis, lupus, thyroid all came back negative. Then, about four years ago, I was diagnosed by a doctor from Hope with Lyme Disease. When I studied up on Lyme, I realized that this was exactly what I had – right down to the bulls-eye rash. The next battle was in determining how to fight this disease. Because of personal feelings, I was reluctant to take antibiotics for the recommended length of time that would be required for someone dealing with Chronic Lyme. I resigned myself to a life of further deterioration and possibly a wheelchair in my future. Then I was introduced to HMS-90. Being a bit of a skeptic, I researched all the information that was available. I read about the doctor from McGill University who first discovered the active ingredient in HMS-90. I read the clinical medical studies, the critical role that glutathione plays in the body, I skimmed through the patents that have been issued to Immunotec Research Inc. regarding HMS-90 and much more. The deciding factor was that this is a 100% natural protein that would do so many good things for my body even if it wasn't effective against the Lyme Disease. So, not expecting anything dramatic to happen, I started taking it. The results astounded me! I regained energy that I hadn't had in years! I could get through a whole day without feeling like I was on the verge of collapse. Over the next few months, all of my Lyme symptoms disappeared entirely or were so reduced that I hardly noticed them. I've had Lyme for a long time and I know that it will take a long time to fight this disease but HMS-90 has given me back my life! Thank you Dr. Bounous and Immunotec Research

Please – do yourself or a loved a huge favor and find out what HMS-90 can do!

Lyme Disease Testimonial # 134

Manuel Alonso has spirochetal post-infection syndrome (lyme disease), and CFS (chronic fatigue syndrome). See what Immunocal/HMS90 has done for him. This extraordinary

I have now been back one week on 2 packs a day and the difference is amazing!! I can now truly say that this product makes a difference. The levels of energy dramatically change in patients like mw with compromised immune function and chronic disease. As my case relates to spirochetal post-infection syndrome, and CFS, I think the potential for this in the Lyme patients and CFS is enormous. If I get strong enough, I would not mind at all to hit a couple of Lecture circuits. I have done my share of lecturing as professor in my days and as the foundation director later. I have practice. Again, if I get better, I have to go to Boston to meet with some foundations there, so if I can be of use in the east coast, we can talk about it. I want other people that suffer similar illnesses to benefit from this. In any event, please ship part of the 18 boxes as soon as you can, I do Not want to run out of this again.
