

## **MS-Multiple sclerosis**

### **MS-Multiple sclerosis Testimonial # 53:**

I have a good friend who has been on **Immunocal next spring three years**. She also will have been **diagnosed with MS three years ago** at the same time. She has been in **remission ever since**. In the winter actually uses their hot tub. And the summer before she took bike lessons and learned how to ride the Harley her and her husband bought. She works full time for the government and I know other than in the beginning she hasn't been forced to lose any time at work because of it. She went through probably the **most stressful** time in her personal life as well as at work, and she came through with just a little **numbness in her leg**. Everyone with MS should be on Immunocal, for that matter everyone should be on it. **Debbie H. / Alberta, Canada**

### **MS-Multiple sclerosis Testimonial # 54**

My name is **Karen**. One morning in 1995, I woke up in the morning and **fell to the floor** --I had **partial paralysis along my left side**. At first, the doctors thought I had a stroke, but upon further investigation the final **diagnosis was probable Multiple Sclerosis**. I was given intravenous steroids to reduce the **swelling in my brain** to give me back my mobility. But that was just the beginning. I was given Amitriptyline and Carbamazepine for reducing the pain and Dilantin to control seizures. My **blood pressure** went sky high (200/165) and I was given Atenol (and of course waterpills to counteract the side effects of the Atenol). I was taking so many different drugs, I felt like a regular pharmacy. In 1996, I had another attack where I partially **lost my sight**. Everything was **fuzzy** like real bad reception on your T.V. This meant more drugs and two weeks in the hospital. **After two years** of all the pills and the various attacks, I was **really worn** out. I was suffering from **total fatigue** and couldn't stay awake past 8 pm. Then in November 1997, I was introduced to **Immunocal/HMS 90**. After **only two weeks**, I started to feel the difference. The pain was **diminishing** and before long I wasn't taking any more pain killers. I also said goodbye to the blood pressure pills. BUT most of all, I have **energy again** and LOTS of it! I am able to do all the things I used to do before the MS. I got my life back--- **Thank You Immunotec! Karen lives in Toronto, Canada. She is available to speak with MS patients**

### **MS-Multiple sclerosis Testimonial #55**

March 11, 2001 Hi my name is **Beth Moscrop**. I am from Peterborough, Ontario and I have **Multiple Sclerosis (MS)** I am very happy to say that I am doing quite well with the help of **HMS90 (Immunocal)** I am not on any medication. I am getting real good strength in my legs back so I don't need to take as many rest breaks. I feel that overall I am feeling a lot better and can deal with **stressful situations** a lot better. I admit I still have to pace myself. I can not clean the whole house in one afternoon but I can do room by room and that is more than I was doing 1 1/2 years ago. My daughter who is five years old makes sure that I remember to take **my two packs a day** because she knows that it is helping her mommy. I am so happy to be able to do things on my own again and still ask for help the odd time. It is great to be **able to drive again** and have my **vision clear**. I can stand and not feel as dizzy (still a bit but not as much). I can walk through a crowd without feeling too dizzy. Last year at this time I was using a walker and I was not too strong at all. I do not ever want to be confined like that again and I thank God and **HMS 90** for helping me. Those of you who have MS please feel free to contact me if you would like to talk and those of you who don't have MS just pray to God and thank him for keeping you from this disease. Thanks Immunotec for your help  
**Beth Moscrop**

### **MS-Multiple sclerosis Testimonial # 56:**

Dear Dr. Bounous,

I don't know how to start a letter of such importance other than to just get started trying to tell you how much you have changed not only my life but that of my whole family. I had been **diagnosed with Multiple Sclerosis over 20 years ago**. I have **relapsing remitting form of MS**. I have gone the full gambit of symptoms over the years. Everything from **numbness to paralysis, blurred vision** to blindness and pain. I'm sure you can imagine how many drugs and therapies. I have never experienced a Christmas season without my yearly stay in hospital undergoing some form of IV therapy. This is my first year without visiting my local hospital. Approximately **nine months ago** after a month and a half in hospital I was introduced to **HMS90 (Immunocal)** by a good friend Sandra McCrindle. She sat in my kitchen with another Immunotec distributor spouting all the praises of HMS90 to my husband. I wouldn't come out to listen. I had heard it all before. All I wanted to know is when I could take my next Morphine pill. The two dear friends persisted and my husband bought our first box of HMS90. After much persuasion from my husband I drank the drink he had mixed for me not expecting anything from it. After two months on the product I had to admit that I was feeling better. Only after our daughter came home from Ottawa and was amazed in the difference she saw since she had last seen me in hospital did I really start to believe it. I was so stubborn even when I was up walking in my walker. I am now after ten months on the product not taking anything for pain or any other MS medication. I don't use anything for walking in the house; and only use a cane outside for uneven ground. **My mother also has had MS for over 30 years**. She is also having phenomenal results on HMS90. She has been on the product for over three months now and our family could not believe the change in either of us at Christmas. Her speech, and over all strength have dramatically improved. She is also free from bladder infections since on HMS90. Although she is full time in a wheelchair her overall quality of life has improved. Her transfers are stronger; and she even stood up for the family at Christmas with little assistance. My husband after watching me improve so dramatically wanted to try the product also. He has **Wegner granulomatosis** and was going through a difficult time with side effects to **chemo drugs** like cyclophosphamide and other drugs. The **HMS90 has improved** his strength and he no longer has the nausea from side effects of the drugs he must continue to take. Our family is now a four box a month user. Even our **dog Burt** couldn't be left out; so he is on **Xtralife**. My children and husband have their wife and mother back because of your research and talent in bringing this wonderful product to everyone. Thank you, Thank-you, Thank you. Our whole family is on HMS90 and feeling the benefits. **Sincerely, Kathy Charwood**

### **MS-Multiple sclerosis Testimonial #57**

"I started on **Immunocal** in November 2000. I met someone on the internet, when we were talking once I mentioned that I **have MS**, her reply was "Me too, I have this nutritional product that you have to try". She was kind enough to send me a months supply. I tried it and 6 days later I noticed a dramatic eradication of one of the **MS symptom**. For months before I had developed an **extremely weak bladder** causing me to be **incontinent (wetting accidents)** so often that I needed to wear bladder protection. This was a very disruptive symptom that had developed because of MS. **Only 6 days after** starting Immunocal I did not have that problem any longer. I still wore the bladder protection for about 2 weeks or so due to fear that it would return but every time I was forced to have to "hold it" I had not one drop of an accident. I no longer need to wear that protection. 6 months later I steadily have more improvements. The **exhaustion** I was experiencing has diminished to not noticeable. My vision and stability has also dramatically

improved. I thank God for my friend for telling me of this incredible product and mostly I thank Immunotec research for **developing** Immunocal. " Sincerely, **Dawn Turck** 05/23/2001

radio commentator Michael Reagan**

**MS-Multiple sclerosis Testimonial # 58:**

My name is **Richard Jackan** I was **diagnosed with multiple sclerosis in 1997** at that time I was the chief engineer of an electrical connector company in Santa Ana California. After several months the company **decided I should retire** so they gave me one year salary and a nice goodbye. I went from a very good salary to Social Security. Well that was the beginning of my quest to find some way to find relief from multiple sclerosis. Since that time I have looked into multiple forms of relief, I started out by going to anyone that seemed to have something they said would help, I went two chiropractors and herbalists, I even tried Hyperbaric Medicine, which is going into a chamber which simulates you going underwater to 37 ft. and breathing pure oxygen while in the chamber, while I was doing the Hyperbaric Medicine, I found out about **glutathione**, which is an essential health aid, from a clinical nurse specialist who informed me that glutathione is only administered intravenously so I had him order a supply so he could administer it. So I started injecting glutathione and it really seemed to work on the symptoms of multiple sclerosis, I continued use it until I discontinued the Hyperbaric Medicine, which was too costly to maintain. I started looking for a new source of glutathione I looked throughout the Internet trying to find a new source for glutathione, I found many references to glutathione but the sources for glutathione were in pill form, and from my research I knew that glutathione does not work when taken orally. So I continued my search and bumped into a product that claimed it produced glutathione internally that product is Immunocal. I went into the Internet to locate sources for Immunocal and I got in contact with the Immunocal Company Representative and ordered my first boxes of Immunocal. And now my story really begins. **I started taking Immunocal on September 8, 2003** since that time I have started noticing a slow recuperation first after a couple of weeks the bottoms of my feet, which had very little feeling and my toes were not spreading when I wanted them to, both the feeling of the bottom of my feet has come back and I can spread my toes at will, which might not seem to impressive but when the feeling comes back and you can move your toes at will, that's not bad. Another encouraging thing that has happened is after I came down with this little case of MS (Joke)... I was no longer able to snap the fingers of my left hand, interesting enough, after a few weeks of using Immunocal I was able, once again, to snap the fingers of my left hand and that's also not bad. Other interesting things have been happening, I seem to have **better vision** and other things seem to be functioning better."

**Richard Jackan**

**MS-Multiple sclerosis Testimonial # 59**

**Susan Doppler** from North Dakota shared: Hi, my name is **Tom Paul and I am 45** years young. This is my story **about Immunocal** and how it has assisted us in our fight with **Multiple Sclerosis (MS)**. In 1987 I began having various problems walking, standing, and with my vision. I went in to see my doctor and they indicated I had MS. I denied having the disease for about eight years, at which time it began to eliminate my ability to be independent in life i.e., **could not walk without falling, very tired, vision problems**. Ruby, my spouse and I determined it was time to begin to get serious about this MS. We adjusted my diet, and I began taking a multiple vitamin. This really did not seem to make

much of a difference, and some friends suggested I talk with the Doppler's regarding nutrition. Sue told me about Immunocal. I begin to use it and saw some benefits, but still was having complications due to the MS. Sue suggested that I **raise my intake to two packets a day** , I did and since then we've **seen more improvement**. We really believe that I am doing better because of our faith in God, a good attitude, diet, exercises, and Immunocal. I was in to see the doctor three weeks ago and they did a spinal tap and determined by the spinal fluid that the MS is in remission. This is the first time in three years there has been any improvement. We give the glory to God, the great supplements that the Doppler's have introduced us to and a great attitude. Jesus is our life **Tom and Ruby Paul**
