

Prostate Cancer Testimonial

Dear Mr. Molson,

Thanks to your great generosity in supplying me with a Free Box of Immunocal I was then able to take two x 20g Sachets per day and with such an incentive from you I managed to obtain sufficient Immunocal for a 3 month Trial at 2 x 20g Sachets per day.

My Doctor has always been kept aware by me of the experiments I have conducted on my condition over the past 7 years since diagnosis and treatment for the Aggressive Form of Prostate Cancer. All my efforts have been to prevent metastasis by high doses of many types of Anti-oxidants as it became apparent to me that after the initial treatments following diagnosis then a man was on his own, except that his condition would be observed by PSA Blood Tests and periodically, usually by request, X-Rays, Cat Scans, colonoscopy and gastroscopy. All of these are to test for the existence of any metastasis and not to treat them if any become apparent. Also that if any did appear then the only treatment was a repeat of Hormone Treatment as further Radiation was out of the question. It was also made clear to me that Hormone Treatment was not always as effective 2nd time around in lowering PSA or in slowing down the metastasis, neither were the medical authorities around the world knowledgeable of when would be the best time to start the repeat Hormone Treatment. Would it be best immediately the PSA commenced to rise, or 3 months later, 6 months, one year etc? To that end I was led to believe that Trials are being conducted in UK, Australia and New Zealand and it would be many years indeed before enough statistics were obtained to make a decision. Many men will die during that waiting period. Not wishing to be one of the unfortunates I started to read up on Supplements and came to the conclusion that Prevention of metastasis was the way to go and that in so attacking the problem that way then perhaps the PSA level might drop or at least stabilize at a low value.

My Doctor is one in a million and is very co-operative in assisting me to keep a check on the direction my Cancer is taking. Because of his authorization to have all checks performed we have been able to note that my Cancer has not metastasized, even after all these years. That indicated to me that Anti-oxidant Treatment was effective in scavenging up Free Radicals and preventing Metastasis. However, it also indicated that they had no effect on lowering the PSA Levels which had started to rise at an alarmingly fast rate. I was then fortunate enough to learn that the vertebrae of Sharks contained an oil, Squalomine Oil, which was said to be a Tumour Shrinker. I commenced to consume 2 to 5 vertebrae per day depending on the size of the vertebrae.

The effect was immediate. The rapid acceleration of my PSA stopped and it leveled out to hover between 12.8 to 15.4 over the following 5 Tests made at 3 monthly intervals. As long as there was no metastasis evident I was content with that hovering, hovering means no acceleration I told myself.

But then in November 2007 the dreaded acceleration returned in that the level jumped from 14.2 to 18.6 in the 3 months since August. I was at a loss at what to do next and decided to take a look at my Full Blood Count Test Results. From those and to my layman's way of minimum understanding of the results I considered that my Immune System left something to be desired, if anything it appeared to me that it was heading in the wrong direction.

I then read the book, "breakthrough in Cell Defense". I did thus receive an education in the benefits of Glutathione and searched the Internet and one thing leading to another I was happily brought to Immunotec Research and to your good self and your Associates who have been most helpful.

The "Feed Back of Good New" as the Subject Heading of this letter is that the 3 months of treatment with Immunocal at 2 x 20g Sachets per day has brought about the absolutely amazing result of lowering my PSA from the 18.6 to only 5.9!!! Absolutely incredible news and I thank God for it in that it is He who I believe periodically creates persons of extremely high intellect, like Dr. Bounous, and those of you diligently and patiently researching at Immunotec Research for the benefit of Mankind. My Doctor is extremely pleased with this result and as overjoyed with it as he would be if it were his own condition that had been so helped. He is Doctor who genuinely puts the health and welfare of his patients first. In his own words he said, "This is exciting, Bob". And indeed it is. We are now looking forward to what results the next 3 months will bring.

Your Distributor in NSW, Mr. Ken Newton, has been found to be most reliable and trustworthy and he has gone even one step further in that he has granted to me a Discount on my next Order which has enabled me to order 3 more boxes

of Immunocal plus 3 Boxes of Immunocal Platinum which I believe will further enhance the efficacy of the Standard Immunocal. This has broke the Bank but money is of no value if I am 6 foot down. Every day above ground is a good day. Hopefully the result in 3 months time will enable me to risk dropping the dosage down to a maintenance level. At that time I may ask you if I can safely eliminate some of the other supplements I take and thus the money saved there will help pay for Immunocal in the future. At this time I think it is best that I continue with everything so that the only change is Immunocal and thus the improvements can be directly attributed to Immunocal.

I am now dosing with 1 x 20g Immunocal + 1 x 20g Immunocal Platinum together first thing after arising. Then last thing before retiring for the night I take another Immunocal x 20g.

You will note , Mr. Molson , that not only did my PSA drop from 18.6 to 5.9 , but the Full Blood Count Sample taken on the same day showed that 8 of the 10 components had increased in their values . A reverse to what had been happening. So that also was great news and we are all hopeful that they will increase again over the next three months. Things will then certainly be getting very exciting and I know my doctor will be most pleased.

Thank you for everything, God Bless and I hope that you are enjoying a Happy and Holy Easter, **Bob**

Hello John: Prostate Cancer

My husband just received his latest PSA reading since the last email I sent you three months ago and his PSA level went from 5.0 to 1.8. THANKS TO IMMUNOCAL!!!! The Immunocal is eating up the cancer cells in his prostate. However, the bone scan showed two legions of activity. One on his shoulder and the other in his pelvic area. The doctor wanted to do radiation; but my husband said he will stay on his Immunocal and take another scan in December. By that time, hopefully, he will be clear.

Thank you so much for the case studies you sent and my up line Sarah Anthony for the all the encouragement and to my husband for having faith in Immunocal and sticking with it. Veronia

Larry Prostate Cancer Testimonial # 90

My name is Larry and I was diagnosed with **prostate cancer** in Dec 2001 with a Gleason score of 3+3. After 2 consultations with my urologist, I elected to go with the natural way of healing and managed to keep my PSA under control. In addition to my many natural supplements, my diet was 90% vegetarian. I continued to lose weight and lacked energy. I was introduced to Immunocal (HMS90) 5 months ago and have been on 3 packages a day. To date, I have regained my normal weight, improved muscle mass, and am full of energy. My recent physical examination with my family doctor revealed a soft prostrate and normal in size. I also take Magistral twice a day for preventative purposes. I owe my good feeling and mental attitude to this amazing product Immunocal. My golf game has never been better! My age is 65 going on 40! **Larry McArthur Red Deer, Alberta Canada**

Franklin Prostate Cancer Testimonial # 91

Franklin was a semi-retired general practitioner who at age 68 scored a PSA reading of over 8 micrograms/liter on a routine screening exam, suggesting a high possibility of **prostate cancer**. In continued tests, a urologist took a cystoscopic biopsy and confirmed the diagnosis. Four out of Franklin's six biopsy sites tested positive for high-grade tumor. For personal and practical reasons, Franklin delayed aggressive treatment and opted to take 30 grams/day of Immunocal, (3 pouches) a protein isolate that raises glutathione levels. Bimonthly PSA levels showed a gradual decline, his latest reading being 3.8 u/L. He is still being closely followed by his urologist, and his decision to undergo chemotherapy, radiotherapy or surgery will be deferred unless his PSA levels rise again

Prostate Cancer Testimonial # 92

June 11, 2002 This is Norman's experience:

Dear Herb,

About two years ago, Norman became very ill with **Congestive Heart Failure and Pneumonia**. In the hospital they found **Prostate Cancer**. Norman could not walk 10 feet without being totally out of breath. With medication, and herbs, there was some improvement. During this time, our friends Cathy and Bob called and told us about Immunocal. I asked them to send it out as soon as they could. Norman started taking 3 envelopes a day and in a month he was getting up,

going out in the yard doing things. When we went to the Doctor, Norman's PSA had dropped from 53 to 0.4. Today, he is not on any medication, but takes 2-3 envelopes of Immunocal a day, and is doing very well.
