

Skin Ulcers

SEVERE LEG ULCERS Testimonial # 115

Hi there,

I have a story for you An old friend by the name of Bob Essig is a customer of mine.. H is story: He was in the VA hospital for severe ulcers on his legs...he had been in the hospital for 4 months I got him to take Immunocal (2 packs a day) It was no easy task, He by nature is one of the most negative puckerbutts on the planet, a severe diabetic and quite obese. The VA doctors had told him the legs both had to be amputated below the knee He said "Let them rot off you ain't gong to cut them off" the ulcers were so bad you could literally see the bone..He had some major skin grafts that didn't take 3 months later one leg is healed completely and he is taking 80% less insulin. Did I mention he requires oxygen?? he wears a canula full time until now and now he can go for an hour or so without it. The VA doctor is dumbfounded and I think she is probably going to be a customer/distributor of mine. His other leg is healing fast and he no longer uses crutches. Him being a crusty old "wounded in action Marine vet" it takes some doing to even put up with him for some goofy reason he likes me and Marty and for the last 20 years or so has been a cherished friend of the family. On rare occasions I may say something "nice" about him because the quality of his friendship is first rate BUT!!!! I will be quadralaterely incandescently damed if I will EVER say anything NICE TO him!!!! He is very outspoken about "flim flam Charlies magic goofy dust" (honest I am trying to get him to say "IMMUNOCAL") He is a great testimonial and I thought you might like to hear about it. Mike would you and McTavish Gimme a call on the telecommunicator (I think Pa Bell calls it a phone) I am moving along pretty good (I think) and would like a little counsel maybe a LOTTA counsel. As I go flopping along in this mortal coil called life with only half my weapons in the wits department, I am barely smart enough to know I need counsel from time to time.

Cheers, Charlie
